

635nm 15mW LD

By converting the external APC circuit board into an ASIC, we package the APC circuit into a traditional TO-can together with the laser chip. From now on, single package APC function included laser diode is realized.

Powered with Arima's proprietary APC **LASER DIODE™** technology, **ADL-63153TB4** is your perfect solution for the stable light power output, compact size, high brightness laser light source.

Features

1. 635nm 15mW 50°C high reliable operation
2. Saving space and cost of laser module
3. Voltage driven LD, easy to use
4. Highly stable laser output power
5. Strong reverse bias protection
6. Reliable high temperature operation
7. High ESD sustainability voltage, ~10KV
